How to Use This Guide

This Learner Guide contains the detailed click-by-click procedures for the course. The slide deck is intentionally concept-led and visual; use this guide while performing the labs. Ten realistic scenarios progress from story framing and visual insight to dashboards, stakeholder review, parameters, actions and an interactive regional capstone.

Course and Repository Access

Courseware and assessment portal: https://lms-tms.tertiaryinfotech.com/

Hands-on lab repository: https://github.com/tertiarycourses/TGS-2020505550-Data-Storytelling-with-Tableau

- Option A: clone the repository with Git and open the numbered lab folder.
- Option B: select Code > Download ZIP on GitHub and extract the entire folder tree.
- Each lab folder contains a synthetic Excel workbook, Tableau starter (.twb), packaged sample (.twbx) and README.
- Use Tableau Public or Tableau Desktop. Never publish confidential organisational data to Tableau Public.

Learning Outcomes

- LO1: Utilise Tableau for data visualisation.
- LO2: Identify trends and patterns from data.
- LO3: Develop dashboards and stories for data storytelling.
- LO4: Present stories to stakeholders and review them with subject-matter experts.
- LO5: Design interactive visualisations for data storytelling.

Skills Framework Alignment

Code	Type	Criterion
K1	Knowledge	New data visualisation tools and techniques
K2	Knowledge	Methods to portray patterns, trends and correlations
K3	Knowledge	Dashboard development process and techniques
K4	Knowledge	Features of data displays
K5	Knowledge	Strategic visualisation and mapping techniques
A1	Ability	Introduce new or emerging visualisation tools and techniques that are fit for purpose
A2	Ability	Exercise judgement so critical trends and findings are presented optimally

© 2026 Tertiary Infotech Academy Pte Ltd. All rights reserved. · www.tertiarycourses.com.sg

A3	Ability	Develop dashboards and scorecards with advanced visualisation and embedded analytics
A4	Ability	Review tables, graphs and dynamic displays against stakeholder questions
A5	Ability	Design navigation, layout, user interface and user experience for interactive graphics
A6	Ability	Align interpretation and presentation of findings with subject-matter experts

Storytelling Workflow

- Frame one decision question and identify the audience.
- Validate the Excel source, analysis grain, field roles and definitions.
- Explore patterns, trends, relationships and exceptions in worksheets.
- Choose visual encodings that make the decisive comparison clear.
- Assemble dashboards with hierarchy, context, visible filter state and accessible interaction.
- Sequence story points, present the implication, capture SME review and revise traceably.

Tableau Setup and Conventions

- Install Tableau Public or Tableau Desktop and confirm that Excel connections are available.
- Keep each lab's Excel, TWB and TWBX files together. The TWB uses a relative Data path; reconnect to the local Excel workbook when prompted.
- In the Data pane, verify dates, geographic roles, dimensions, measures and default aggregation before building a view.
- Use question-based worksheet titles, consistent units and descriptive captions. Do not rely on colour alone.
- Package the final workbook as .twbx when the data must travel with the workbook.
- Save a new version before a stakeholder or SME review so changes remain traceable.

Topic 01: Data Storytelling Using Tableau

Story purpose · audience · evidence · storyboard · Tableau workflow

Key concepts

- **Story purpose:** Connect a decision, evidence, explanation and call to action.
- **Audience:** Match depth, vocabulary and interaction to stakeholder needs and data literacy.
- **Story arc:** Orient the audience, reveal the change, explain the driver and land the decision.
- **Storyboard:** Sketch the sequence before building worksheets and dashboards.
- **Tableau workflow:** Connect, explore, build views, assemble dashboards, create story points and share.

© 2026 Tertiary Infotech Academy Pte Ltd. All rights reserved. · www.tertiarycourses.com.sg

- **Tool fit:** Choose Tableau when governed visual exploration and interactive communication are needed.

Lab 1: Frame a Retail Performance Story

Alignment	LO1 · A1 · K1
Excel data	labs/lab-01-*/lab-01-retail-story-brief.xlsx
Tableau starter	labs/lab-01-*/lab-01-starter.twb
Expected output	A validated Tableau data connection, audience brief, story objective and three-point storyboard.

Goal. Act as an analyst for Lion City Retail and turn a raw branch-performance request into a decision-focused Tableau story brief.

Before you begin

- Keep the Excel workbook, Tableau starter and packaged sample together in the same lab folder.
- Use only the synthetic training data supplied in this lab.
- If Tableau asks for the source, browse to the Excel workbook in the same folder and select the named data sheet.
- Save frequently. Use a packaged workbook (.twbx) when evidence must travel without a separate data file.

Detailed procedure

1	**Open the lab folder and review the Scenario, Data Dictionary and Sales_Data sheets.** Confirm the dataset contains one row per store-month-product category.
2	**In Tableau, connect to the Excel workbook and select Sales_Data.** Verify Date is a date, Sales and Profit are measures, and Store/Region/Category are dimensions.
3	**Create a source-audit sheet showing row count, minimum date, maximum date and distinct stores.** Resolve any field-type warning before continuing.
4	**Write the decision question and target audience in the Story_Brief sheet.** Use one sentence: decision owner + decision + time horizon.
5	**Sketch three story points: performance context, underperforming branch, recommended action.** Each point must contain one takeaway and one supporting view.
6	**Save the Tableau workbook with the course code and your name.** Use a .twb or .twbx file and keep the Excel source beside it.

Acceptance test

A reviewer can state the audience, decision, evidence grain and three-point narrative without opening Tableau.

© 2026 Tertiary Infotech Academy Pte Ltd. All rights reserved. · www.tertiarycourses.com.sg

Evidence to retain

- The completed Tableau workbook, preferably packaged as .twbx.
- A screenshot or exported view of the principal dashboard or story point.
- A short note explaining the evidence, assumption and limitation.
- The learner's own interpretation and decision recommendation.

Lab 2: Build a Campaign Insight Narrative

Alignment	LO1 · A1 · K1
Excel data	labs/lab-02-*/lab-02-campaign-story.xlsx
Tableau starter	labs/lab-02-*/lab-02-starter.twb
Expected output	Three worksheets and a story outline linking reach, conversion and profitable customer segments.

Goal. Evaluate a multi-channel skincare launch and structure a concise Tableau narrative for a marketing director.

Before you begin

- Keep the Excel workbook, Tableau starter and packaged sample together in the same lab folder.
- Use only the synthetic training data supplied in this lab.
- If Tableau asks for the source, browse to the Excel workbook in the same folder and select the named data sheet.
- Save frequently. Use a packaged workbook (.twbx) when evidence must travel without a separate data file.

Detailed procedure

1	**Read the campaign brief and identify the primary business decision.** Decide whether to reallocate next-month media spend and to which channel.
2	**Connect Tableau to Campaign_Data and review channel, audience, week and campaign fields.** Keep Rate fields as percentages and spend/revenue as currency.
3	**Build a channel comparison view for spend, attributed revenue and return on ad spend.** Sort by the decision metric and retain the baseline.
4	**Build a weekly trend view for conversion rate and attributed revenue.** Annotate the launch and promotion weeks.
5	**Build a segment view that exposes high-value and weak-performing audience groups.** Use colour only for meaningful performance status.
6	**Complete the story-point captions in the workbook brief.** Every caption states evidence, implication and proposed action.

© 2026 Tertiary Infotech Academy Pte Ltd. All rights reserved. · www.tertiarycourses.com.sg

Acceptance test

The narrative identifies one channel to scale, one audience to protect and one risk or limitation to monitor.

Evidence to retain

- The completed Tableau workbook, preferably packaged as .twbx.
- A screenshot or exported view of the principal dashboard or story point.
- A short note explaining the evidence, assumption and limitation.
- The learner's own interpretation and decision recommendation.

Topic 02: Drawing Insights from Visualisation

Chart selection · perception · patterns · trends · comparisons · uncertainty

Key concepts

- **Question first:** Select a chart from the analytical question, not from visual novelty.
- **Comparison:** Use position and length to make category differences easy to judge.
- **Trend:** Use time on a continuous axis and preserve meaningful baselines and intervals.
- **Relationship:** Use scatterplots to inspect association, clusters and unusual observations.
- **Composition:** Show part-to-whole only when the total and categories are stable and meaningful.
- **Annotation:** Direct attention to the evidence without hiding context or uncertainty.

Lab 3: Diagnose Service Trends and Outliers

Alignment	LO2 · A2 · K2
Excel data	labs/lab-03-*/lab-03-service-trends.xlsx
Tableau starter	labs/lab-03-*/lab-03-starter.twb
Expected output	A trend view, distribution view and annotated exception view with a defensible operational insight.

Goal. Analyse a customer-support operation to distinguish sustained trend, weekly seasonality and unusual service failures.

Before you begin

- Keep the Excel workbook, Tableau starter and packaged sample together in the same lab folder.
- Use only the synthetic training data supplied in this lab.
- If Tableau asks for the source, browse to the Excel workbook in the same folder and select the named data sheet.
- Save frequently. Use a packaged workbook (.twbx) when evidence must travel without a separate data file.

Detailed procedure

1	**Connect to Ticket_Data and validate Created_Date, Channel, Issue_Type, Resolution_Hours and CSAT.** Treat Ticket_ID as a dimension and Resolution_Hours as a measure.

2	**Create a weekly line chart for ticket volume and median resolution time.**

© 2026 Tertiary Infotech Academy Pte Ltd. All rights reserved. · www.tertiarycourses.com.sg

	Use separate axes or panes; do not imply identical units.

3	**Create a box plot or distribution view by issue type.** Identify spread and unusual observations rather than relying on the mean alone.

4	**Add a reference line for the 24-hour service target.** Label the target and format breaches consistently.

5	**Annotate the two most material exceptions and check the underlying records.** Separate an isolated outlier from a sustained operational shift.

6	**Write the management takeaway and next diagnostic question.** Include evidence, uncertainty and owner.

Acceptance test

The final view distinguishes trend, seasonality and exceptions and does not claim causation from correlation.

Evidence to retain

- The completed Tableau workbook, preferably packaged as .twbx.
- A screenshot or exported view of the principal dashboard or story point.
- A short note explaining the evidence, assumption and limitation.
- The learner's own interpretation and decision recommendation.

Lab 4: Map Delivery Performance Across Singapore

Alignment	LO2 · A2 · K2
Excel data	labs/lab-04-*/lab-04-singapore-delivery-map.xlsx
Tableau starter	labs/lab-04-*/lab-04-starter.twb
Expected output	A proportional-symbol map, ranked companion chart and geographic insight with a stated data-quality caveat.

Goal. Use geocoded delivery records to find where late deliveries and high order value overlap across Singapore planning areas.

Before you begin

- Keep the Excel workbook, Tableau starter and packaged sample together in the same lab folder.
- Use only the synthetic training data supplied in this lab.
- If Tableau asks for the source, browse to the Excel workbook in the same folder and select the named data sheet.
- Save frequently. Use a packaged workbook (.twbx) when evidence must travel without a separate data file.

Detailed procedure

1	**Connect to Delivery_Data and assign geographic roles to Planning_Area, Latitude and Longitude.**

© 2026 Tertiary Infotech Academy Pte Ltd. All rights reserved. · www.tertiarycourses.com.sg

	Use supplied coordinates when name matching is ambiguous.

2	**Create a map using AVG(Longitude) and AVG(Latitude), with Planning_Area on Detail.** Check all 18 planning areas are represented.

3	**Encode order volume by size and late-delivery rate by colour.** Use a sequential scale and a visible legend.

4	**Create a ranked bar chart of late deliveries by planning area.** Sort descending and add the network target reference line.

5	**Add a dashboard filter so selecting a region updates both views.** Show the active filter state in the title.

6	**Document the geographic caveat.** Planning-area centroids show area-level patterns, not exact household locations.

Acceptance test

The map and ranking agree on the highest-priority planning areas and the caveat prevents over-precise interpretation.

Evidence to retain

- The completed Tableau workbook, preferably packaged as .twbx.
- A screenshot or exported view of the principal dashboard or story point.
- A short note explaining the evidence, assumption and limitation.
- The learner's own interpretation and decision recommendation.

Topic 03: Develop Dashboards and Stories

Dashboard architecture · layout · context · story points · narrative sequence

Key concepts

- **Dashboard purpose:** One primary decision and a small set of supporting questions.
- **Information hierarchy:** Place the decisive message first, then explanation and detail.
- **Layout:** Use containers, alignment, whitespace and predictable reading order.
- **Context:** Expose period, scope, definitions, filter state and data freshness.
- **Story points:** Sequence views or dashboards so each point advances the argument.
- **Performance:** Limit marks, heavy filters and redundant views so interaction stays responsive.

Lab 5: Assemble an Omnichannel Executive Dashboard

Alignment	LO3 · A3 · K3
Excel data	labs/lab-05-*/lab-05-executive-dashboard.xlsx
Tableau starter	labs/lab-05-*/lab-05-starter.twb
Expected output	A 1366 x 768 dashboard with KPI strip, revenue

© 2026 Tertiary Infotech Academy Pte Ltd. All rights reserved. · www.tertiarycourses.com.sg

	trend, channel comparison, store drill-down and visible context.

Goal. Build a fixed-size executive dashboard that connects KPI, trend, channel and store evidence for an omnichannel retailer.

Before you begin

- Keep the Excel workbook, Tableau starter and packaged sample together in the same lab folder.
- Use only the synthetic training data supplied in this lab.
- If Tableau asks for the source, browse to the Excel workbook in the same folder and select the named data sheet.
- Save frequently. Use a packaged workbook (.twbx) when evidence must travel without a separate data file.

Detailed procedure

1	**Connect to Orders and Targets and confirm the relationship at Month + Region grain.** Avoid a physical join that duplicates orders.
2	**Create calculated fields for Profit Ratio and Target Attainment.** Use SUM-level calculations and protect against zero denominators.
3	**Build KPI cards for Sales, Profit, Profit Ratio and Target Attainment.** Apply consistent number formats and semantic colour.
4	**Build the trend, channel and store views.** Give each view a question-based title rather than a field name.
5	**Assemble the dashboard with tiled containers and a 1366 x 768 fixed size.** Place decision summary first, explanation second and detail last.
6	**Add period, region and channel filters and apply them deliberately.** Verify the KPI strip and every supporting view respond consistently.

Acceptance test

The dashboard answers the executive question in under 30 seconds and exposes period, filters, definitions and freshness.

Evidence to retain

- The completed Tableau workbook, preferably packaged as .twbx.
- A screenshot or exported view of the principal dashboard or story point.
- A short note explaining the evidence, assumption and limitation.
- The learner's own interpretation and decision recommendation.

Lab 6: Create a Branch Turnaround Tableau Story

Alignment	LO3 · A3 · K3
Excel data	labs/lab-06-*/lab-06-branch-turnaround-story.xlsx

© 2026 Tertiary Infotech Academy Pte Ltd. All rights reserved. · www.tertiarycourses.com.sg

Tableau starter	labs/lab-06-*/lab-06-starter.twb
Expected output	A four-point Tableau Story with captions, annotations, saved filter states and a clear call to action.

Goal. Sequence dashboards into a Tableau Story that moves from portfolio context to branch diagnosis and an accountable turnaround decision.

Before you begin

- Keep the Excel workbook, Tableau starter and packaged sample together in the same lab folder.
- Use only the synthetic training data supplied in this lab.
- If Tableau asks for the source, browse to the Excel workbook in the same folder and select the named data sheet.
- Save frequently. Use a packaged workbook (.twbx) when evidence must travel without a separate data file.

Detailed procedure

1	**Connect to Branch_Performance and review the supplied storyboard.** Confirm the story has one decision and four evidence beats.
2	**Create the portfolio overview and select the branch that materially misses target.** Use comparable periods and consistent definitions.
3	**Create driver views for traffic, conversion, basket size and margin.** Do not overload one view with every measure.
4	**Create the intervention view showing owner, trigger, target and guardrail.** Make action contingent on measurable evidence.
5	**Create a Tableau Story and add four story points.** Use Duplicate or Save as New so each point retains the intended filter state.
6	**Write active headlines and present in sequence.** Each caption states what changed and why it matters.

Acceptance test

Each story point advances the argument, the filter state is intentional, and the last point names an owner and next action.

Evidence to retain

- The completed Tableau workbook, preferably packaged as .twbx.
- A screenshot or exported view of the principal dashboard or story point.
- A short note explaining the evidence, assumption and limitation.
- The learner's own interpretation and decision recommendation.

© 2026 Tertiary Infotech Academy Pte Ltd. All rights reserved. · www.tertiarycourses.com.sg

Topic 04: Present and Review Stories

Stakeholder narrative · presentation · SME review · evidence traceability

Key concepts

- **Executive opening:** Lead with the decision, impact and confidence level.
- **Evidence ladder:** Move from KPI to trend, driver, segment and record-level detail.
- **Interaction discipline:** Use filters to answer likely questions without losing the narrative.
- **SME review:** Separate data facts, analytical interpretation and domain judgement.
- **Revision log:** Record what changed, why, who reviewed it and which evidence supports it.
- **Accessibility:** Use descriptive titles, sufficient contrast, limited marks and non-colour cues.

Lab 7: Present a Hospital Flow Story

Alignment	LO4 · A4 · K4
Excel data	labs/lab-07-*/lab-07-hospital-flow.xlsx
Tableau starter	labs/lab-07-*/lab-07-starter.twb
Expected output	A stakeholder-ready dashboard, five-minute presentation script and question/evidence log.

Goal. Present a patient-flow dashboard to clinical and operations stakeholders, then capture questions and decisions without over-claiming clinical causation.

Before you begin

- Keep the Excel workbook, Tableau starter and packaged sample together in the same lab folder.
- Use only the synthetic training data supplied in this lab.
- If Tableau asks for the source, browse to the Excel workbook in the same folder and select the named data sheet.
- Save frequently. Use a packaged workbook (.twbx) when evidence must travel without a separate data file.

Detailed procedure

1	**Connect to Patient_Flow and review metric definitions with the audience brief.** Keep the dataset synthetic and aggregated; do not infer patient-level causation.
2	**Build arrival, wait-time, admission and bed-occupancy views.** Use median wait time and expose the service target.
3	**Assemble the dashboard for the clinical operations review.** Use descriptive titles and preserve unit labels.
4	**Prepare a five-minute script using opening, evidence, implication, recommendation and caveat.** Lead with the decision, not with the chart mechanics.
5	**Record stakeholder questions in the Review_Log sheet.** Map each question to an existing view, new analysis or domain decision.

© 2026 Tertiary Infotech Academy Pte Ltd. All rights reserved. · www.tertiarycourses.com.sg

6	**Revise one title, annotation or view based on the review.** Record the change and reviewer rationale.

Acceptance test

The presentation answers the operations question, identifies a limitation and records unresolved SME questions for follow-up.

Evidence to retain

- The completed Tableau workbook, preferably packaged as .twbx.
- A screenshot or exported view of the principal dashboard or story point.
- A short note explaining the evidence, assumption and limitation.
- The learner's own interpretation and decision recommendation.

Lab 8: Run an SME Review and Evidence Revision

Alignment	LO4 · A4 · A6 · K4
Excel data	labs/lab-08-*/lab-08-sme-review.xlsx
Tableau starter	labs/lab-08-*/lab-08-starter.twb
Expected output	A reviewed dashboard, metric-definition register, decision log and v2 release note.

Goal. Review a sustainability dashboard with finance and facilities SMEs, reconcile definition differences and release a traceable revision.

Before you begin

- Keep the Excel workbook, Tableau starter and packaged sample together in the same lab folder.
- Use only the synthetic training data supplied in this lab.
- If Tableau asks for the source, browse to the Excel workbook in the same folder and select the named data sheet.
- Save frequently. Use a packaged workbook (.twbx) when evidence must travel without a separate data file.

Detailed procedure

1	**Connect to Energy_Use and Emission_Factors and inspect the relationship keys.** Confirm site-month-energy source is the analysis grain.

2	**Build energy intensity, emissions trend and site comparison views.** Show units, denominator and reporting period in the view.

3	**Use the Review_Checklist to test questions, definitions, filters, accessibility and source traceability.** Classify each finding as data, analysis, presentation or domain judgement.

4	**Reconcile the electricity emission factor with the facilities SME.** Record the approved factor, source date and owner.

5	**Revise the dashboard and update the change log.**

© 2026 Tertiary Infotech Academy Pte Ltd. All rights reserved. · www.tertiarycourses.com.sg

	Do not silently replace the original interpretation.

6	**Prepare a release note for stakeholders.** State what changed, decision impact and any remaining limitation.

Acceptance test

Every material claim has a definition, evidence source and reviewer; the change log distinguishes correction from interpretation.

Evidence to retain

- The completed Tableau workbook, preferably packaged as .twbx.
- A screenshot or exported view of the principal dashboard or story point.
- A short note explaining the evidence, assumption and limitation.
- The learner's own interpretation and decision recommendation.

Topic 05: Create Interactive Stories

Calculated fields · parameters · filters · actions · navigation · user experience

Key concepts

- **Calculated fields:** Create governed measures and business logic when source fields are insufficient.
- **Parameters:** Expose a controlled value that can drive calculations, filters or reference lines.
- **Filter actions:** Use a selected mark in one view to constrain another view.
- **Highlight actions:** Preserve context while emphasizing related marks.
- **URL and navigation:** Connect the dashboard to detail, definitions or another analytical view.
- **Experience design:** Make state, affordance, reset and next action visible to the user.

Lab 9: Build a Parameter-Driven Pricing Explorer

Alignment	LO5 · A5 · K5
Excel data	labs/lab-09-*/lab-09-pricing-explorer.xlsx
Tableau starter	labs/lab-09-*/lab-09-starter.twb
Expected output	A dashboard with metric parameter, discount threshold, dynamic title, parameter action and reset guidance.

Goal. Create an interactive pricing view where managers can switch metrics, set a discount threshold and inspect product risk.

Before you begin

- Keep the Excel workbook, Tableau starter and packaged sample together in the same lab folder.
- Use only the synthetic training data supplied in this lab.
- If Tableau asks for the source, browse to the Excel workbook in the same folder and select the named data sheet.
- Save frequently. Use a packaged workbook (.twbx) when evidence must travel without a separate data file.

© 2026 Tertiary Infotech Academy Pte Ltd. All rights reserved. · www.tertiarycourses.com.sg

Detailed procedure

1	**Connect to Product_Performance and validate price, discount, revenue, cost and units.** Use Product_ID as a stable dimension.
2	**Create a Metric Selector parameter for Revenue, Profit and Profit Ratio.** Display the parameter control and set Revenue as default.
3	**Create a Selected Metric calculated field driven by the parameter.** Use aggregated calculations consistently.
4	**Create a Discount Threshold parameter and a Risk Status calculated field.** Flag high discount with weak profit ratio.
5	**Build the product ranking and detail views and assemble the dashboard.** Use a dynamic title that names the selected metric and threshold.
6	**Add a parameter or navigation action and clear reset instructions.** Verify state changes are visible and reversible.

Acceptance test

A user can switch the metric, change the threshold, select a product and reset the view without editing a worksheet.

Evidence to retain

- The completed Tableau workbook, preferably packaged as .twbx.
- A screenshot or exported view of the principal dashboard or story point.
- A short note explaining the evidence, assumption and limitation.
- The learner's own interpretation and decision recommendation.

Lab 10: Deliver an Interactive Regional Story Capstone

Alignment	LO1–LO5 · A1–A6 · K1–K5
Excel data	labs/lab-10-*/lab-10-regional-capstone.xlsx
Tableau starter	labs/lab-10-*/lab-10-starter.twb
Expected output	A packaged Tableau workbook with executive dashboard, geographic drill-down, interactive story and signed review checklist.

Goal. Deliver a decision-ready interactive story for a regional retailer using calculations, map, dashboard actions, story points and SME review evidence.

Before you begin

- Keep the Excel workbook, Tableau starter and packaged sample together in the same lab folder.
- Use only the synthetic training data supplied in this lab.
- If Tableau asks for the source, browse to the Excel workbook in the same folder and select the named data sheet.

© 2026 Tertiary Infotech Academy Pte Ltd. All rights reserved. · www.tertiarycourses.com.sg

- Save frequently. Use a packaged workbook (.twbx) when evidence must travel without a separate data file.

Detailed procedure

1	**Connect to Regional_Sales, Targets and Product_Master and validate relationships.** Confirm all keys match and no relationship duplicates the fact table.
2	**Create Profit, Profit Ratio, Target Attainment and Risk Status calculated fields.** Use clear comments and consistent aggregation.
3	**Build an executive KPI view, monthly trend, country map, category comparison and product detail.** Use one chart purpose per worksheet.
4	**Assemble the dashboard and add filter, highlight and navigation actions.** Test source and target sheets plus clearing behaviour.
5	**Create a four-point story: context, risk, driver and decision.** Save the intended filter state and write active captions.
6	**Run the SME review, revise the story and package the workbook.** Save a .twbx, capture the review record and confirm all acceptance checks.

Acceptance test

The packaged workbook opens with embedded data; interactions work; the story answers the decision; and A1–A6 evidence is traceable.

Evidence to retain

- The completed Tableau workbook, preferably packaged as .twbx.
- A screenshot or exported view of the principal dashboard or story point.
- A short note explaining the evidence, assumption and limitation.
- The learner's own interpretation and decision recommendation.

© 2026 Tertiary Infotech Academy Pte Ltd. All rights reserved. · www.tertiarycourses.com.sg

Quick Tableau Reference

Purpose	Example
Profit	SUM([Sales]) - SUM([Cost])
Profit Ratio	SUM([Profit]) / SUM([Sales])
Metric selector	CASE [Metric Selector] WHEN "Revenue" THEN SUM([Revenue]) WHEN "Profit" THEN SUM([Profit]) ELSE SUM([Profit]) / SUM([Revenue]) END
Risk status	IF AVG([Discount]) >= [Discount Threshold] AND SUM([Profit]) / SUM([Revenue]) < 0.20 THEN "Review" ELSE "OK" END
Running total	RUNNING_SUM(SUM([Sales]))

Assessment Flow

- Complete TRAQOM / SSG digital attendance.
- Complete assessment digital attendance.
- Sit the 1-hour Written Assessment followed by the 90-minute Practical Performance assessment.
- Upload the completed question papers and required evidence to the LMS.
- Sign the Assessment Summary Record.
